TREATMENT OUTCOME IN PATIENTS WITH PERI-IMPLANTITIS IN A PERIODONTAL CLINIC: A RETROSPECTIVE STUDY. ........................................ 1365
Maria Lagervall, Leif E. Jansson
The results of the present study indicate high success rates after surgical treatments of peri-implantitis during a mean follow-up period of ≈2 years; the effectiveness of the therapy was impaired by severe periodontitis, severe mean marginal bone loss around the implants, poor oral hygiene, and low compliance.

PERIODONTAL AND GENERAL HEALTH IN LONG-TERM PERIODONTAL MAINTENANCE PATIENTS TREATED IN A NORWEGIAN PRIVATE PRACTICE: A DESCRIPTIVE REPORT FROM A COMPLIANT AND PARTIALLY COMPLIANT SURVIVOR POPULATION. .................. 1374
Øystein Fardal, Patrick Fardal, C. Rutger Persson
Partially compliant periodontal maintenance patients show a higher rate of tooth loss than compliant patients; long-term monitoring of compliant periodontal maintenance patients revealed a similar level of diabetes II as in the general population and 0.0037 myocardial infarcts per patient per year.

THE ASSOCIATION BETWEEN CLINICAL AND RADIOGRAPHIC PERIODONTAL MEASUREMENTS DURING PERIODONTAL MAINTENANCE. .................. 1382
Jeffrey B. Payne, Pirkka V. Nummikoski, David M. Thompson, Lorne M. Golub, Julie A. Stoner
During periodontal maintenance in postmenopausal women, although no longitudinal change preceded another measurement change, changes in probing depths and clinical attachment levels appeared to reflect changes in the underlying alveolar bone over time.

INTRA-PREGNANCY NON-SURGICAL PERIODONTAL TREATMENT AND PREGNANCY OUTCOME: A RANDOMIZED CONTROLLED TRIAL. .................. 1391
Martina Pirie, Gerard Linden, Christopher Irwin
Intrapregnancy non-surgical periodontal treatment, completed at 20 to 24 weeks, did not affect the risk of preterm/low birthweight delivery in a homogeneous group of white Western European women in Northern Ireland.

INFLUENCE OF DYSLIPIDEMIA AND DIABETES MELLITUS ON CHRONIC PERIODONTAL DISEASE. .................. 1401
Juliane Almeida Aodo, Fabiano Ribeiro Cirano, Marco Zaffalon Casati, Fernanda Vieira Ribeiro, Viviana Giampaoli, Renato Corrêa Viana Casarin, Suzana Peres Pimentel
The present study found that dyslipidemia, either alone or in association with type-2 diabetes mellitus (DM), is not related to periodontal breakdown; however, type-2 DM was significantly associated with loss of attachment level.

Predictive Power of the Severity Measure of Attachment Loss for Periodontal Care Need ............................................ 1409
Honghu Liu, Marvin Marcus, Carl A. Maida, Yan Wang, Jie Shen, Vladimir W. Spolsky
The cumulative periodontal morbidity has the strongest impact on the need for periodontal care, and the demographic variables and covariates follow the classic pattern of association with periodontal disease.

Efficacy of Collagen Membrane Seeded With Autologous Gingival Fibroblasts in Gingival Recession Treatment: A Randomized, Controlled Pilot Study ............................................. 1416
Serhat Köseoğlu, İsmet Duran, Mehmet Sağlam, S. Buket Bozkurt, Osman S. Kirtlioglu, Sema S. Hakki
Increased root coverage was observed in Miller Class I recessions treated with both collagen membrane (CM) alone and CM seeded with autologous gingival fibroblasts, but the percentage of root coverage was greater in the sites treated with CM plus autologous fibroblasts.

Mathematical Modeling Suggests That Periodontitis Behaves as a Non-Linear Chaotic Dynamical Process ............................................. e29
G. Papantonopoulos, K. Takahashi, T. Bountis, B.G. Loos
Mathematical modeling by iteration dynamics, suggests that periodontitis behaves as a non-linear chaotic process and that the host-immune response level determines the progression rate.

Effect of Nanoscale Topography of Titanium Implants on Bone Vessel Network, Osteocytes, and Mineral Densities ............................................. e40
Tonino Traini, Giovanna Murmma, Maurizio Piattelli, Antonio Scarano, Marzia Pettinacchio, Bruna Sinjari, Sergio Caputi
After 8 weeks, the bone tissue around implants treated with a deposition of a nanocrystals layer of CoP showed an active structuring process with a higher number of osteocytes and the presence of a developing vessel network with an extensive area of bone with low mineral density.

Increased Nucleic Acid Receptor Expression in Chronic Periodontitis ........ e48
S. Esra Sahingur, Xia-Juan Xia, Stephanie C. Voth, W. Andrew Yeudall, John C. Gunsolley
Microbial DNA sensors such as toll-like receptors were expressed in higher levels in gingival tissues from individuals with periodontitis versus those with gingival health.

Periodontal Ligament Stem Cells Possess the Characteristics of Pericytes .................................................. 1425
Kengo Iwasaki, Motohiro Komaki, Naoki Yokoyama, Yuichi Tanaka, Atsuko Taki, Yasuyuki Kimura, Masaki Takeda, Shigeru Oda, Yuichi Izumi, Ikuo Morita
This study demonstrates that mesenchymal stem cells isolated from periodontal ligament possess pericyte-like characters in vitro and suggests the origin of periodontal ligament stem cells as pericytes in the tissue.

Optimal Medium Formulation for the Long-Term Expansion and
Maintenance of Human Periodontal Ligament Stem Cells .......... 1434
Im-Hee Jung, Bo-Sun Kwon, Se-Hee Kim, Hye-Eun Shin, Choong-Man Jun, Jeong-Ho Yun
The inherent capacity of human periodontal ligament stem cells could be maintained until a later
passage in the α-MEM-based optimal medium.

Influence of Periodontal Status and Periodontopathogens on Levels
of Oral Human β-Defensin-2 in Saliva ......................... 1445
Alexandre L. Pereira, Gilson C. Franco, Sheila C. Cortelli, Davi R. Aquino,
Fernando O. Costa, Suzane A. Raslan, José R. Cortelli
Levels of salivary beta-defensin-2 were influenced by periodontal status but were not related
with the frequency of periodontopathogens.

Orally Administered Liposomal Lactoferrin Inhibits Inflammation-Related
Bone Breakdown Without Interrupting Orthodontic Tooth Movement. .. 1454
Orally administered liposomal bovine lactoferrin significantly inhibits lipopolysaccharide-induced
alveolar bone resorption but not orthodontic force-induced bone remodeling.

Resveratrol Decreases Periodontal Breakdown and Modulates Local
Levels of Cytokines During Periodontitis in Rats .................. e58
Marcio Z. Casati, Carolina Algayer, Geisa Cardoso da Cruz, Fernanda V. Ribeiro,
Renato C.V. Casarin, Suzana P. Pimentel, Fabiano R. Cirano
Resveratrol treatment in rats resulted in less bone loss than in the control group and lower levels of
interleukin (IL)-17 but no difference in levels of IL-1β or IL-4.

Virulence Mechanism of Bacteria in Mixed Infection: Attenuation of Cytokine
Levels and Evasion of Polymorphonuclear Leukocyte Phagocytosis ....... 1463
David Polak, Lor Snapira, Ervin I. Weiss, Yael Houri-Haddad
Phagocytosis of Porphyromonas gingivalis and interleukin-1β levels are attenuated in response to live
mixed infection compared with that of heat-killed mixed infection; these mechanisms may enable
the bacteria to evade the host response during periodontal infection.

The Upregulation of Transglutaminase-2 by Cyclosporin A in Human
Gingival Fibroblasts Is Augmented by Oxidative Stress ............. 1469
Shiuan-Shinn Lee, Chung-Hung Tsai, Yu-Hsiang Kuan, Fu-Mei Huang, Yu-Chao Chang
Cyclosporin A increased generation of reactive oxygen species by gingival fibroblasts
and increased transglutaminase-2 in a dose dependent manner.

A Synthetic Oligopeptide Derived From Enamel Matrix Derivative Promotes the Differentiation of Human Periodontal Ligament Stem Cells Into Osteoblast-Like Cells With Increased Mineralization... 1476
Hirohito Kato, Nobuhito Katayama, Yoichiro Taguchi, Kazuya Tominaga, Makoto Umeda, Akio Tanaka

A synthetic oligopeptide derived from enamel matrix derivative when cultured with osteogenic medium significantly enhanced proliferation of periodontal ligament stem cells as well as alkaline phosphatase activity, the expression of osteonectin, osteocalcin production, the formation of calcified nodules, and mineralization.

The Influence of β-Tricalcium Phosphate Blocks Containing Extracellular Matrix on Osteogenic Differentiation of Rat Bone Marrow Stromal Cells... 1484
Kazuto Iwasaki, Norikazu Munemasa, Kazuhiro Tago, Kenji Nemoto, Hiroshi Tsujigami, Akira Sugaya, Shinji Deguchi

Osteogenic differentiation of rat bone marrow stromal cells in the β-tricalcium blocks containing extracellular matrix was significantly higher than in the control group.

Oral Neutrophils Display a Site-Specific Phenotype Characterized by Expression of T-Cell Receptors.......................... 1493
Flavia S. Lakschevitz, Guy M. Abecdi, Michael Glogauer

Oral neutrophils present a site-specific gene expression profile in healthy individuals, and a significant increase in T-cell receptor expression compared to circulating neutrophils, suggesting a role for oral neutrophils in cross-talk between innate and adaptive immune system in the mouth.

Regulation of Periodontal Ligament Cell Behavior by Cyclic Mechanical Loading and Substrate Nanotexture...................... 1504
Na Yu, Ljupcho Prodanov, Joost te Riet, Fang Yang, X. Frank Wulbomers, John A. Jansen

Results from this study suggest that mechanical stimulation is crucial to regulate osteogenic and ligament gene activity in periodontal ligament (PDL) cells; moreover, the extracellular matrix resembling structures induce different responses from PDL cells in morphology and gene expression.
